

**1.2: Characteristics of Polynomial Functions****Example 1:**

Match each of the following equations with its graph. Fill in the blanks below.

|                              |                                |                           |                          |
|------------------------------|--------------------------------|---------------------------|--------------------------|
| $f(x) = 2x^3 - 4x^2 + x + 1$ | $g(x) = -x^4 + 10x^2 + 5x - 4$ | $h(x) = -2x^5 + 5x^3 - x$ | $p(x) = x^6 - 16x^2 + 3$ |
|------------------------------|--------------------------------|---------------------------|--------------------------|

a)

Equation: \_\_\_\_\_

# of x-intercepts: \_\_\_\_\_

# absolute max: \_\_\_\_\_

# absolute min: \_\_\_\_\_

# local max: \_\_\_\_\_

# local min: \_\_\_\_\_

total # locals: \_\_\_\_\_

b)

Equation: \_\_\_\_\_

# of x-intercepts: \_\_\_\_\_

# absolute max: \_\_\_\_\_

# absolute min: \_\_\_\_\_

# local max: \_\_\_\_\_

# local min: \_\_\_\_\_

total # locals: \_\_\_\_\_

c)

Equation: \_\_\_\_\_

x-intercept: \_\_\_\_\_

# absolute max: \_\_\_\_\_

# absolute min: \_\_\_\_\_

# local max: \_\_\_\_\_

# local min: \_\_\_\_\_

total # locals: \_\_\_\_\_

d)

Equation: \_\_\_\_\_

x-intercept: \_\_\_\_\_

# absolute max: \_\_\_\_\_

# absolute min: \_\_\_\_\_

# local max: \_\_\_\_\_

# local min: \_\_\_\_\_

total # locals: \_\_\_\_\_

**Example 2:**

The following table of values represents a polynomial function. Use finite differences to determine the degree of the polynomial function, the sign of the leading coefficient, and the value of the leading coefficient.

| x  | y   | First Differences | Second Differences | Third Differences | Fourth Differences |
|----|-----|-------------------|--------------------|-------------------|--------------------|
| -3 | -54 |                   |                    |                   |                    |
| -2 | -16 |                   |                    |                   |                    |
| -1 | -2  |                   |                    |                   |                    |
| 0  | 0   |                   |                    |                   |                    |
| 1  | 2   |                   |                    |                   |                    |
| 2  | 16  |                   |                    |                   |                    |
| 3  | 54  |                   |                    |                   |                    |
| 4  | 128 |                   |                    |                   |                    |

**Example 3:**

Consider the function  $f(x) = -x^3 + 2x^2 + 3x$ .

- a) How do the degree and the sign of the leading coefficient correspond to the end behaviour of the polynomial function?

- b) Sketch a graph of the polynomial function. Include all intercepts.

- c) What can you tell about the value of the third differences for this function? Calculate.
