

(5.3) Graphs of the Primary Trigonometric Functions

Considering we have just examined Radian measure and $\pi = 180^\circ$.

Graph $y = \sin x$.

Graph $y = \cos x$.

Graph $y = \tan x$. $y = \frac{\sin x}{\cos x} \leftarrow \text{Zeros}$
 $\cos x \leftarrow \text{V.A.}$

x	y
0	0
$\frac{\pi}{4}$	1
$\frac{\pi}{2}$	Error (V.A.)
$\frac{3\pi}{4}$	-1
π	0

We can describe certain properties of these functions using general terms.

For example, describe all the zeros where the function $y = \cos x$ occurs.

Describe where all the maximums of $y = \sin x$ occur.

$$x = \frac{\pi}{2} + n(2\pi)$$

$$x = \frac{\pi}{2} + 2n\pi, n \in \mathbb{Z}$$

Describe intervals of increase for $y = \tan x$.

$$-\frac{\pi}{2} + n\pi < x < \frac{\pi}{2} + n\pi, n \in \mathbb{Z}$$
